

ENHANCEMENTS

- [ENG-5042] – Improved turnaround time for PST exports initiated from the UI
- [ENG-5289] – Display messages with 'Comments' from the Search Views page
- [ENG-5373] – PST imports and exports each have their unique queue on PST node
- [ENG-5396] – Full QA audit of My Archive's compatibility with different combinations of Windows, IE, and Outlook.
- [ENG-5420] – Added staging environments from which EML files can be picked up to be imported into archive accounts
- [ENG-5421] – Modified required naming convention to process EML file imports
- [ENG-5494] – Ability to process PST data staged on AWS S3 in zip files
- [ENG-5525] – Improved granularity of Postini import command

BUG FIXES

- [ENG-4977] – POP3 email collection logs error and keep collecting messages when message size is not returned
- [ENG-4989] – Administrator can edit account without receiving "Outlook User" error
- [ENG-5206] – Messages in My Archive show embedded images (not links)
- [ENG-5251 & ENG-5415] – Resolved issue around failing PST exports
- [ENG-5346] – Added account mysql ID when packing/indexing Postini imports
- [ENG-5349] – Resolved issue with POP3 unavailable after initial collection
- [ENG-5350] – Improved audit against reported collection ID when processing PSTs
- [ENG-5372] – Resolved issue around Postini migration configuration
- [ENG-5536] – Users can paginate through search results without getting 'red banners'

PARTNER API

- [ENG-5478] – Account creations require a 'mail_domain' (at least one valid mail domain is required)
