

ENHANCEMENTS

- [ENG-5617] – Automated legacy data imports accept MBOX/Maildir formats
 - [ENG-5840] – Legacy data (PST) imports can be associated to an end user without directory integration
 - [ENG-5900] – The archive always returns UTF-8 encoded emails in Original View
 - [ENG-5901] – The archive is returning scrubbed body content in Original View
 - [ENG-5902] – The UI treats Original View content as sanitized UTF-8 content
 - [ENG-6055] – Improved email packing and indexing design to resolve potential user interface display issues (original view, save as, exports, etc)
-

BUG FIXES

- [ENG-3590] – Resolved issue around wrong redirection page when we cannot determine first/last name from SAML assertion
 - [ENG-3615] – European characters display correctly in Text/Original view and in TXT, HTML and PDF Exports
 - [ENG-3871] – Resolve issue with searches timing out due to content of criteria
 - [ENG-5858/6509] – Improved automated PST imports failing on some files
 - [ENG-5707] – Original View for filtered messages without attachments displays correctly
 - [ENG-5708] – Runtime counters and logic fixes for Exchange folder synchronization
 - [ENG-5727] – Resolved issue where ‘mode’ (test or normal) was ignored by POP3
 - [ENG-5875] – Resolved purge issue with documents no being removed from the archive
 - [ENG-6082] – Fix Java issue with the Drag and Drop tool
 - [ENG-6096] – “Country” dropdown is correctly populated when creating new accounts
-

PARTNER API

- [ENG-4160] - User’s My Archive email addresses can be updated via the API.
- [ENG-5845] – Ability to create an account via the API or otherwise without an account organization domain name
- [ENG-5943] – Service creation through the API returns a location containing the account UUID and not the MySQL ID
- [ENG-5945] – Setting service to inactive upon creation through the API is honored
